

Flat Flex LED strip extrusion mounting systems

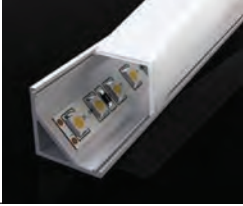

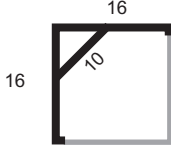

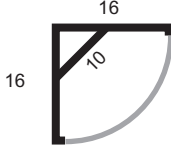

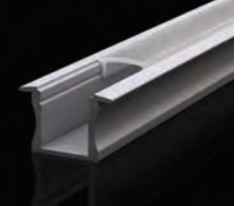

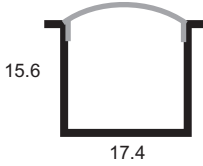

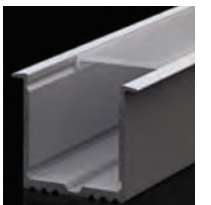

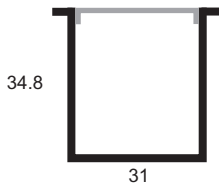

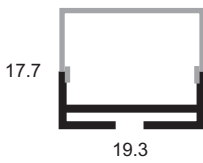

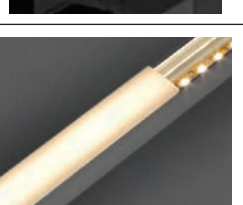

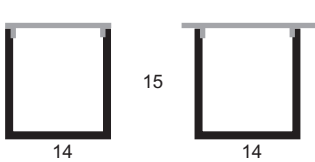

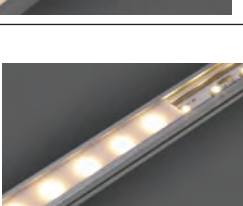

TEC LED LIGHTING introduces its range of aluminium extrusion mounting systems.

Each extrusion is designed to house our standard flat flex LED strips and provide a myriad of options when a particular lighting effect is desired. Extrusions and a selection of diffuser inserts with matching end caps are available in lengths of up to 2500mm.

Not only does an extrusion prolong the life of the flat flex LED strip, it also ensures even and consistent lighting.
